

AMPM

Setting up

Installing AMPM:

1. Go to the [github repository](#)
2. Change branch to dependency-upgrade
3. `npm install gallagher-tech/ampm#dependency-upgrade -g`
4. `cd` into the relevant folder, clone the repository:
 - a. `git clone https://github.com/gallagher-tech/ampm.git`

Uninstalling AMPM:

1. `npm uninstall -g ampm`

How to run a sample in the web:

1. Open the web sample in visual studio code:
 - a. `cd` into the samples/web folder
2. Check which branch you're in (best with git bash)
 - a. If you're NOT in dependency upgrade, you have to change branches into dependency upgrade
 - i. `git checkout dependency-upgrade`
 - ii. Afterwards, you should be in the dependency-upgrade branch
 - b. Open with visual studio
 - i. `code ..`
 - c. Open the README file, follow instructions
 - i. `cd` into web/server, *`npm install`*
 - ii. *`cd ..`*
 - iii. *`npm install`*
 - iv. *`ampm`*
 1. Afterwards, the web app should open

How to run a sample in other applications (eg. Unity)

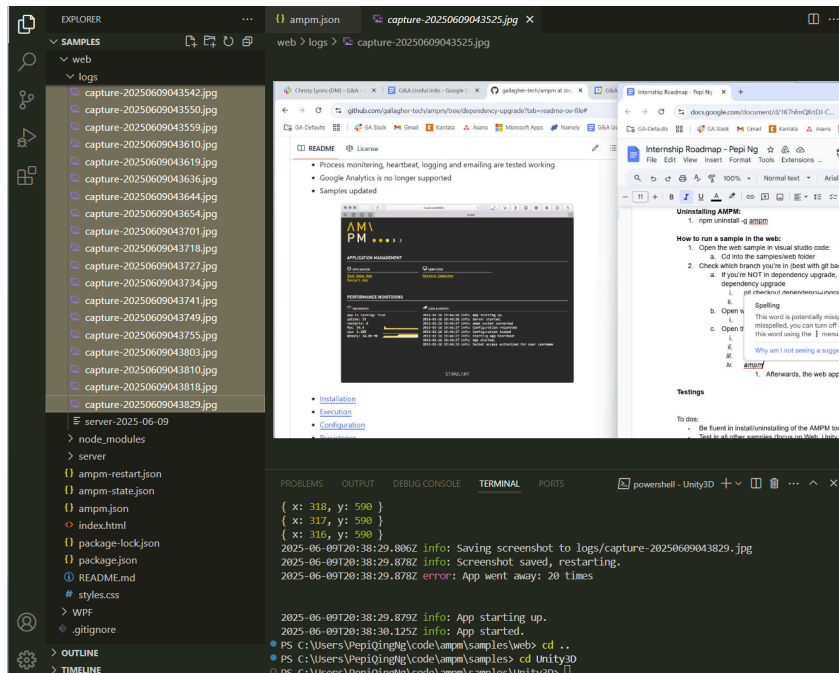

1. In the case of Unity, `cd` into the samples folder, and then `cd` into Unity3D
2. Follow instructions from the [README.me](#) file

Tests

Web app

✓ Crash restart via Alt + F4

- Tested by closing the webapp (Alt + F4) 20 times, passed the test all times (restarted every time)
- Screenshots all successful

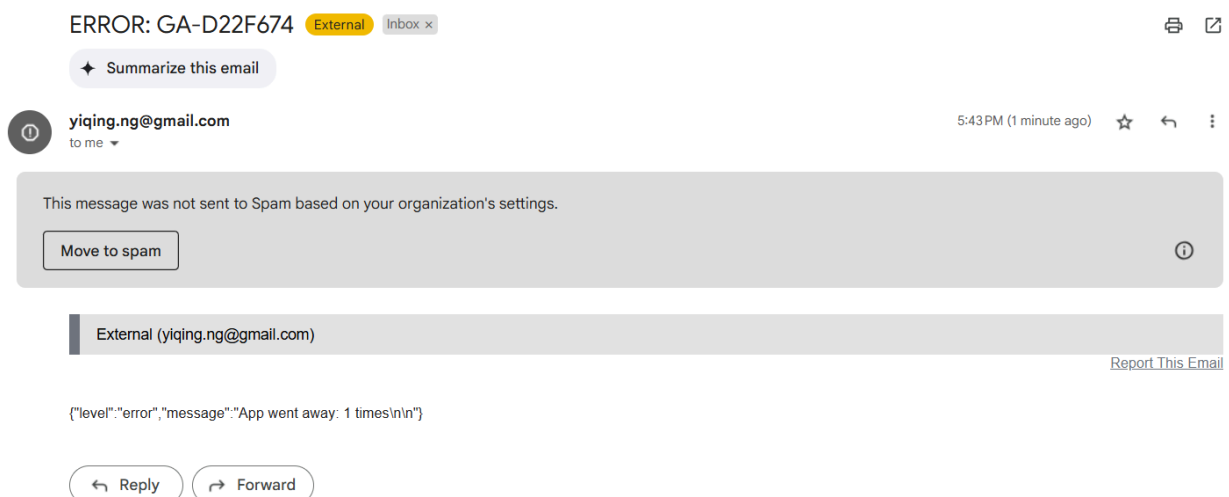

✓ Force quit via Windows Task Manager

Tested by forcing-quit the web application 20 times via the Windows Task Manager. Web Application restarted every time successfully, with a new screenshot added to the logs page.

Error report in email

Successfully sent error message from email, as shown:

Unity

Changes made

- Changed "startupTimeout" and "heartbeatTimeout" in Unity3D/ampm.json file to **0** to allow a maximum amount of time to wait for the application to start working

```
1
2   "default": {
3     "persistence": {
4       "LaunchCommand": "./Build/UnitySample.exe",
5       "maxMemory": 0,
6       "startupTimeout": 0,
7       "heartbeatTimeout": 0
```

- Imported [InGameDebugConsole](#) which was missing for the Unity build to run properly
- Edited README to include more details of which packages to install for the Unity appto run smoothly (ie. TextMeshPro and UnityUI)

☒ Crash restart via Alt + F4

- Tested by closing Unity (Alt + F4) 20 times, passed the test all times (restarted every time)
- Screenshots all successful

☒ Force quit via Windows Task Manager

Tested by forcing-quit the Unity application 20 times via the Windows Task Manager. Web Application restarted every time successfully, with a new screenshot added to the logs page.

OpenFrameworks

Changes made

Created + tested the README file

☒ Force quit via Windows Task Manager

Tested by forcing-quit the web application 20 times via the Windows Task Manager. Web Application restarted every time successfully, with a new screenshot added to the logs page.

☒ Crash restart via Alt + F4

- Tested by closing the webapp (Alt + F4) 20 times, passed the test all times (restarted every time)

- Screenshots all successful

[p5.js](#)

Changes made

Successfully created p5js script with ampm installed.

☒ Force quit via Windows Task Manager

Tested by forcing-quit the web application 20 times via the Windows Task Manager. Application restarted every time successfully, with a new screenshot added to the logs page.

☒ Crash restart via Alt + F4

- Tested by closing the webapp (Alt + F4) 20 times, passed the test all times (restarted every time)
